

14x32 IS

## 14x32 IS Binoculars THE PREMIUM COMPACT BINOCULAR

Get closer to a wide range of subjects using these premium 14x binoculars. With Canon precision optics and a Powered Image Stabilizer to counteract movement, they deliver superbly bright handheld detail for easy and comfortable subject identification.

### Cutting Edge Lens Performance

Canon binoculars feature cutting edge optical technology cultivated in the development of the EOS series DSLR camera lenses. All models are also equipped with Image Stabilizer to maximize the performance of the lenses.

### Compact Design

Experience a clean and compact design. Clever contrasting textures, rounded corners and tapering contours make the binocular's already-small frame appear even smaller. A superb pair of binoculars inside and out – perfect size to bring when viewing sports or wildlife.

# 14x32 IS

## THE PREMIUM COMPACT BINOCULAR

### Powered IS

A mode that delivers more powerful image stabilization than normal IS for strong shaking or natural body movements. This feature makes long observations more comfortable by providing a more stable image when focusing on a single point that does not move much.

### 14x Magnification

Get closer to a wide range of subjects with the 14x magnification within these binoculars.

### Ergonomic Grip

The non-slip finger grips make the binoculars easy to hold for a stable, easy viewing experience.

### IS Button

A single push of a button activates IS for five minutes, allowing you to focus on viewing your subjects.

### Optical Quality

All models use a Porro prism design that prioritizes resolution and brightness. It also includes a multi-layer coating which reduces flaring and ghosting, perfect for everyday viewing.

### Brightness

This pair of binoculars has a medium sized diameter, which allows for a balance of portability and superb brightness.

### Focusing Distance

The minimum distance viewing has been reduced to 2m, meaning that you can now enjoy viewing objects or creatures at a close range.

### Crisp Images

The field flattener lens corrects any blurring of edges when viewing a specific image, resulting in a sharp image across the entire field of view.
